# Adult Cardiac Arrest Shout for Help/Activate Emergency Response Start CPR · Give oxygen · Attach monitor/defibrillator **Return of Spontaneous** 2 minutes Circulation (ROSC) Post-Cardiac Check **Arrest Care** Rhythm If VF/VT Shock **Drug Therapy** Continuous IV/IO access Epinephrine every 3-5 minutes Continuous Amiodarone for refractory VF/VT **Consider Advanced Airway** Quantitative waveform capnography Cop **Treat Reversible Causes** Monitor CPR Quality

## **CPR Quality**

- . Push hard (≥2 inches [5 cm]) and fast (≥100/min) and allow complete chest recoil
- · Minimize interruptions in compressions
- · Avoid excessive ventilation
- · Rotate compressor every 2 minutes
- · If no advanced airway, 30:2 compression-ventilation ratio
- · Quantitative waveform capnography
  - If PETCO, <10 mm Hg, attempt to improve CPR quality</li>
- · Intra-arterial pressure
  - If relaxation phase (diastolic) pressure <20 mm Hg, attempt to improve CPR quality

### Return of Spontaneous Circulation (ROSC)

- · Pulse and blood pressure
- · Abrupt sustained increase in PETCO, (typically ≥40 mm Hg)
- · Spontaneous arterial pressure waves with intra-arterial monitoring

### **Shock Energy**

- . Biphasic: Manufacturer recommendation (eg, initial dose of 120-200 J); if unknown, use maximum available. Second and subsequent doses should be equivalent, and higher doses may be considered.
- · Monophasic: 360 J

### **Drug Therapy**

- Epinephrine IV/IO Dose: 1 mg every 3-5 minutes
- . Vasopressin IV/IO Dose: 40 units can replace first or second dose of epinephrine
- · Amiodarone IV/IO Dose: First dose: 300 mg bolus. Second dose: 150 mg.

#### Advanced Airway

- · Supraglottic advanced airway or endotracheal intubation
- . Waveform capnography to confirm and monitor ET tube placement
- · 8-10 breaths per minute with continuous chest compressions

#### **Reversible Causes**

- Hypovolemia
- Hypoxia

© 2010 American Heart Association

- Hydrogen ion (acidosis)
- Hypo-/hyperkalemia Hypothermia
- Toxins
  - Thrombosis, pulmonary

- Tension pneumothorax

- Tamponade, cardiac

- Thrombosis, coronary
