

UNDERGRADUATE TRAINING

Program	Duration	Tuition Fee
General medicine (MBBS or M.D. degree)	6 years	150780 rubles

General information

Undergraduate degree program

M.D. degree or analogue of MBBS

Training process

Teaching in medicine covers the principles and practice of general medicine and its specialties, including also general practice (family medicine).

During the course of study students learn through lectures, bedside teaching, case demonstration, outpatient clinics teaching and other modes of instructions and practical work. We widely use simulation-based learning in our Practical Skills Educational Center and Center of Simulation-based Learning.

Students discover the basic knowledge and skills in the prevention, diagnosis and treatment of common medical illness. The course includes clinical classes at University Hospital and other hospitals in Ufa and also outpatient clinics.

Students receive instructions on the diagnosis and management of acute medical problems and emergencies, and the medical care of patients from admission to discharge from hospital, including the use of drugs and procedures.

For the first 3 years of training students are mainly focused on theoretical subjects like biology, medical physics, chemistry, biochemistry, human anatomy, histology, physiology, pathology, microbiology, Latin and foreign languages, social sciences. From the very beginning our students are involved in clinical practice: within 1st and 2nd year they discover basics of nursing care at practical clerkship (1st semester) and basics of clinical examination (3rd semester).

During the last 3 years students learn clinical subjects: internal medicine, surgery, obstetrics and gynecology, public health and prevention.

Language

The official medium of teaching is Russian, except first 3 years taught with English-medium.

Attire

During laboratory classes, students should wear their own laboratory white coats to all sessions, as well as be presentable and dress neatly. Male students are recommended to wear a tie and female students are recommended to wear dress or skirt.

Casual attire and footwear such as jeans, T-shirts, sports shoe, sandals and so forth are not allowed.

During clinical classes, students should wear white apron, medical cap and scrub ("surgical") suite (recommended).

Code of Conduct

Students are expected to observe the following code of conduct of behaviour in public areas where teaching and learning takes place, eg libraries, lecture theatres, rooms, laboratories, clinical skills laboratories and wards, etc:

1. No food and drink in the above-mentioned venues, except under special circumstances with the permission of the Faculty, the departments or the responsible units (eg during functions and meetings).
2. Mobile phones switched to silent mode during class.
3. No littering.
4. Proper demeanour during contact with patients, and at learning sessions with simulation of patient contact, such as clinical skills (e.g. clean and tidy attire, no flip flops, slippers or vests, no chewing gum, etc).

Your teachers, tutors, instructors, as well as Faculty and departmental staff may ask you to leave the venues if your behavior is found to be disturbing to teaching and learning.
